

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class monXception_MonException["monXception::MonException"]
    monXception_MonException --|> std_exception
```

The diagram shows a class hierarchy. At the top is a class box for 'std::exception' with three empty compartments. Below it is a class box for 'monXception::MonException' with three compartments. A blue arrow with an open triangle head points from the 'monXception::MonException' box up to the 'std::exception' box, indicating inheritance.

monXception::MonException

- std::string cause

+ MonException(std::  
string c)  
+ ~MonException()
